

GREEN flo

Containing the combined benefits of Surfactant, Root developer & Osmoprotector

GREEN flo diminishes surface tension in water used for watering of various soils, substrates, recreational areas and dry spots.

Penetration of water occurs more quickly and efficiently into the root areas and the deepest layers of the substrate helping to maintain moisture in the soil for longer periods.

GREEN flo's plant growth bioregulators (Auxins and Cytokinins) signal the plant to increase its root development and growth. This in turn results in better uptake of water and nutrients. The plant will perform much better with an established root system.

Being an osmoprotector, **GREEN flo** maintains the water balance inside the cells of the plant. This prevents shrinking and expanding during stress conditions and means that the plant will continue with normal photosynthesis and the normal translocation of water and nutrients. A better root system helps resist additional stress and more energy is then stored in the roots. **GREEN flo** also increases the uptake and movement of Calcium in the plant, which in turn results in a stronger cell wall and higher resistances to disease and stress.

DIRECTIONS FOR TURFGRASS USAGE :

RATE : 10 Lt / hectare

COMMENTS : Golf Greens Water Surfactant

BIOLOGICAL ACTIVITY:

Auxins	9.070 mg/L
Cytokinins	0.026 mg/L
Glyciene Betaine	49.000 g/L

SHELF LIFE: 2 Years

DATE OF MANUFACTURE:

MANUFACTURED BY: NANCHEM (PTY) LTD
P.O. Box 2777, Mossel Bay | South Africa 6500
Co. Reg. No. 2014 / 202509 / 07 | www.nanturf.com

Quantity
10L
